Supply Chain Performance Improvement,
Inventory/Space Optimization, and Interim Management

Do you need experienced supply chain resources ASAP?
Are you struggling to complete important projects due to ...

**TIME?
LACK OF
RESOURCES?
EXPERTISE?**

RAPID RESPONSE TEAMSSM

RDA's Rapid Response Teams (RRT®) are created from RDA's highly qualified supply chain professionals who have seen hundreds of hospitals - the good, the bad, and the ugly. Utilizing RDA's proven best in class supply chain practices, data analytics and propriety technology solutions, we help you achieve your desired outcomes ... FASTER.

Supply Chain resources as an extension of your team to achieve your goals.

Numerous Hospital Supply Chain Leaders have developed road maps or project plans based on past operational and expense reduction experience with the intent of implementing their desired changes. However, due to numerous daily operational priorities, workload demands, or limited or unavailable qualified internal resources, the desired changes typically never transfer from the roadmap or project plan to reality.

RDA helps clients temporarily fill this gap with its highly skilled resources for a specific time to achieve the desired outcomes of a client's Road Map/Project Plan. We are a niche healthcare experienced supply chain contracted services firm that doesn't have a large overhead and is able to provide experienced SMEs at reasonable rates.

We start from where you are.

Some of our clients want experienced resources to measure supply chain performance as compared to best practices or conduct a root cause analysis of supply chain operations' performance. Other organizations know what is needed but do not have the resources to complete the project(s) in the timeframe necessary. RDA supports both types of clients. Our goal is to maximize results or bandwidth by using experienced resources who have "been there, done that." Sometimes that means moving right into implementation mode without conducting a comprehensive assessment.

Best practices in the real world.

Utilizing RDA's library of numerous healthcare supply chain best practice guidelines and Supply Chain Training Programs, we can provide extensive on-site training and mentoring support to supply chain staff as needed for long term success.

Hands-on problem solvers.

RDA uses a "hands-on" approach that incorporates a training philosophy, so our client's teams can use proven approaches and leverage the tools used by RDA Subject Matter Experts (SMEs) for long term sustainability. In addition, RDA achieves our projects' deliverables on-time, on target, and on budget.

RAPID RESPONSE TEAMSSM

RRT[®] SAMPLE PROJECTS

- Value Analysis Team (VAT) enhancement
- Strategic sourcing and contract negotiations
- Supply chain operations
- Logistics/network design/implementation
- Inventory and space optimization
- Warehouse/storeroom layout
- Supply chain process improvement

OUR APPROACH

1

Scope:

Understand the business need, understand project goals, deliverables, timelines, and skillsets needed.

2

Plan:

Develop the tasks, responsibilities, timelines and dependencies to achieve required outcomes and deliverables.

3

Implement:

Work collaboratively with the organization's team to implement the projects in a leading or supporting role.

4

Update:

Written and verbal progress reports of status of the Project Plan activities, delays, and accomplishments.

5

Measure:

Document baseline measures relative to project outcomes.

HOW WE GET FAST RESULTS THAT LAST

IDENTIFY & ANALYZE

critical success factors and baseline performance

DESIGN & IMPLEMENT

proven strategies customized for client environment

MEASURE PERFORMANCE

compared to industry best practices

SUSTAIN THE GAINS

with continuous monitoring and improvement
